A STEP AHEAD FOR THEIR BEST LIFE

UNDERSTANDING WEIGHT ISSUES

Excess weight occurs when a pet weighs more than their ideal weight, specific to each breed, lifestage and body composition. One in two pets are overweight¹, yet most pet parents don't realise it.²

Certain factors can play a role

- Excess calories
- Lack of exercise
- Breed
- Neutering
- Age

SPOT THE SIGNS OF YOUR PET'S WEIGHT ISSUES

- Ribs cannot easily be felt
- Slow movement
- Loss of an obvious waist
- Shortness of breath
- Collar needs loosening
- Sleeping more than usual
- Difficulty walking

MANAGING YOUR PET'S WEIGHT ISSUES

Overweight pets are at risk of living shorter lives. Even as little as 20% extra weight can increase the likelihood of serious conditions such as osteoarthritis, urinary troubles and cardiovascular and respiratory diseases.²

HOW THE RIGHT FOOD CAN HELP

The benefits of Prescription Diet Weight Management foods

Clinically proven levels of L-carnitine and appropriate levels of protein and fat help pets reach and keep their ideal weight and maintain lean muscle.

A synergistic blend of ingredients helps kick-start the body's natural ability to burn excess fat.

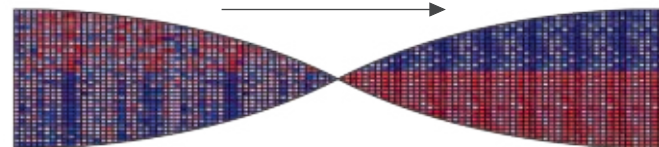

The right blend of fibres helps pets feel full & satisfied between meals.

UNIQUE WEIGHT-MANAGEMENT TECHNOLOGY

Unique weight management technology, based on the science of nutrigenomics, has a great impact on cell function to help kick-start the body's natural ability to burn excess fat and move the pet from a fat-storing to a fat-burning gene profile.

Obese pets are
FAT-STORERS

Lean pets are
FAT-BURNERS

■ Down-regulated

■ Up-regulated

Obese and lean pets have different gene expression

Prescription Diet Weight Management foods help transform the lives of pets with weight conditions through proper nutrition.
